Page 3AMENDMENTS TO THE CLAIMS

1. (Currently Amended) ~~A protocol for driving~~ driving method for a passive liquid crystal display, comprising:

(i) ~~a row (common) driving matrix; said matrix~~ a plurality of orthogonal addressing functions; wherein

(ii) ~~consisting of orthogonal block-circulant matrices; said plurality of~~ orthogonal addressing function is applied simultaneously to a plurality of rows of the said display matrix;

(iii) said plurality of orthogonal addressing functions comprising a row (common) driving matrix and wherein:

(iv) said plurality of orthogonal addressing functions is represented by an orthogonal block-circulant matrix.

a1 cont.
2. (Currently Amended) ~~A protocol method~~ ^{*The driving scheme*} as defined in Claim 1, wherein there are row and column interchanges of said row (common) driving matrix addressing functions.

3. (Deleted)

C ^{*3*} ~~A~~ (Currently Amended) ^{*The driving scheme*} ~~A protocol method~~ as defined in Claim, wherein said row (common) driving matrix is a block diagonal matrix, said block diagonal matrix comprising building blocks, and wherein all the building blocks are orthogonal block-circulant.

C ^{*4*} ~~A~~ (Currently Amended) ^{*The driving scheme*} ~~A protocol method~~ as defined in Claim ^{*3*} ~~A~~, wherein said row (common) driving matrix is a row and column interchanged version of the row (common) driving matrix.
